

DIABLO

Italian Quality and Solution

SPECIALIZED PRODUCTION FUEL PUMP

DIABLO

Fuel Pump Assembly

1 Fuel Filter

Technology Highlights

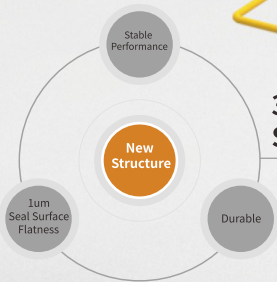

- The product has beautiful appearance and reliable welding quality.
- The filter capacity is $\geq 15g$, and the filtering area of cartridge component is $\geq 1100cm^2$.
- Filtration precision $\leq 30um$.
- Filter circulation efficiency $\geq 90\%$.
- Filter burst pressure $\geq 1.5MPa$, holding time 60s.
- Under 600Kpa air pressure, the air pressure drops $\leq 3KPa$ for 5 seconds.

2 Precision Ceramic Resistor Sheet

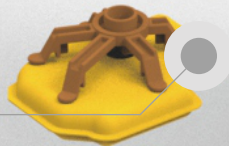

Fuel Gauge Technology Highlights

- By double contact with the resistor piece to reduce the occurrence of poor contact, the resistance value without signal break point. The volume of fuel in the tank is accurately displayed.
- 300,000 times Cyclic Endurance Test.
- The floating rod moves freely without jamming.

3 Pressure Sensors

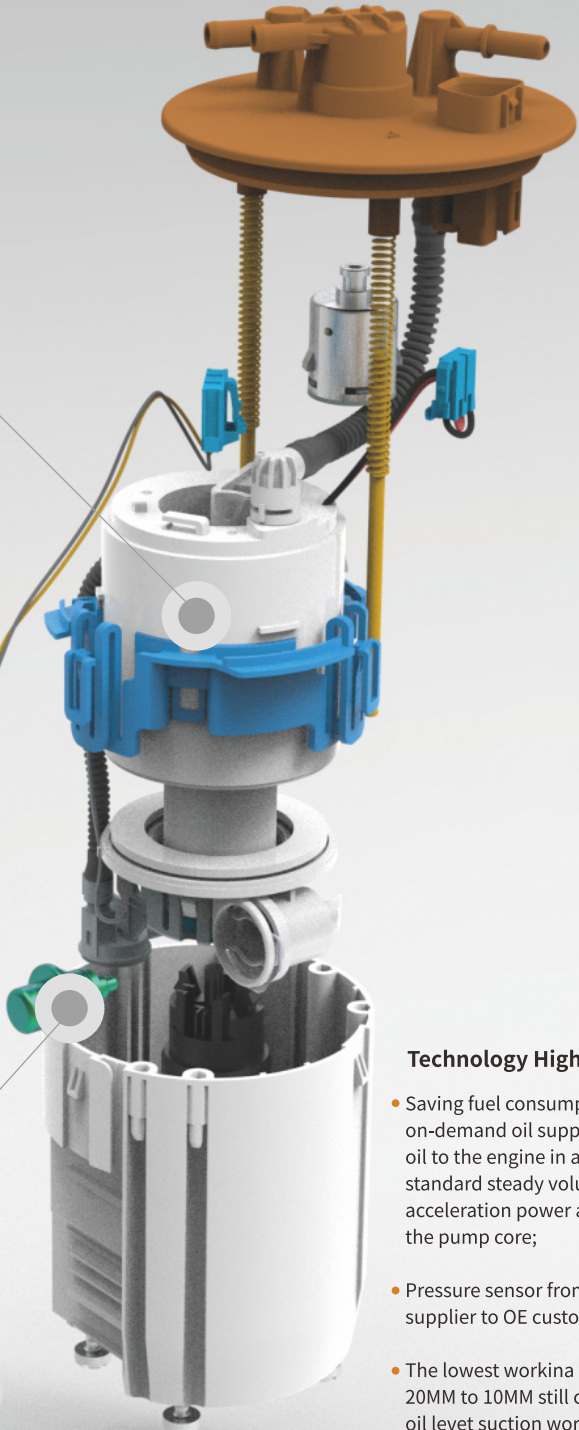

4 High-density Double-layer Filter

Technology Highlights

- Saving fuel consumption by using the on-demand oil supply system, which supplies oil to the engine in accordance with the standard steady volume, improving acceleration power and extending the life of the pump core;
- Pressure sensor from the supplier of the chip supplier to OE customers;
- The lowest working oil level is reduced from 20MM to 10MM still can do the lowest value oil level suction work;
- All plastic products are made of high performance imported raw materials;
- The fuel pump assembly is designed with mature products (38 series), which can resist ethanol corrosion, higher working efficiency and longer life.
- High-density double-layer filter, better design against contaminants

We are continually working on it
